Guizhou University of Engineering Science, Bijie 551700, Guizhou, China

Abstract: This study delves into the impact of modern information technology on English education and teaching. Analyzed the widespread application of information technology in English classrooms, including multimedia teaching, online teaching, and mobile learning, as well as the increasing abundance of information technology teaching resources. It pointed out the problems of information technology in English education and teaching, such as insufficient teacher-student interaction, low student interest in learning, uneven resources, and the authenticity of knowledge acquisition. In response to these issues, this study proposes coping strategies, including improving teachers' information technology teaching ability, strengthening resource construction and utilization, innovating teaching models and methods, and strengthening integration with traditional teaching. Through these strategies, the aim is to fully leverage the advantages of information technology in English education and teaching, improve teaching effectiveness and student learning experience. This study has certain theoretical value and practical significance for promoting the reform of English education and teaching, and promoting the development of educational informatization.

Keywords: Modern information technology; English education and teaching; Impact research; Response strategies; Education informatization

Introduction

With the rapid development of technology, information technology has penetrated into every corner of social life, and education is no exception. English education and teaching, as an important component of the education field, have also been deeply influenced by information technology. This study aims to comprehensively explore the impact of modern information technology on English education and teaching, including the current situation, existing problems, and response strategies, in order to provide theoretical support and practical guidance for English education and teaching reform.

1. The Current Situation of Modern Information Technology in English Education and Teaching

1.1 The Widespread Application of Information Technology in English Classroom

1. Multimedia teaching: The application of multimedia technology makes English classrooms more lively and interesting. Teachers can concretize abstract language knowledge through multimedia resources such as PPTs, videos, and audio, helping students better understand and remember. Meanwhile, multimedia resources can also stimulate students' interest in learning and improve their learning enthusiasm.

2. Network teaching: With the popularization of the Internet, network teaching has become an important means of English education and teaching. Teachers can achieve remote teaching and resource sharing through online teaching platforms. Students can learn English anytime and anywhere through online learning platforms, improving their flexibility and autonomy in learning. Online teaching also breaks geographical restrictions, allowing high-quality educational resources to cover a wider range of regions.

3. Mobile learning: The popularity of mobile devices such as smartphones and tablets has made mobile learning possible. Students can use their fragmented time to learn English by downloading English learning apps, watching online courses, and other means. Mobile learning not only improves the convenience of learning, but also makes learning more personalized and meets the needs of

different students.

1.2 The increasing abundance of information technology teaching resources

1. The number of teaching resources is increasing: With the development of the Internet, the number of English teaching resources is increasing. Teachers can obtain a large amount of teaching videos, courseware, online courses and other resources from the internet, providing rich materials for teaching.

2. Improvement of teaching resource quality: With the development of educational informatization, the quality of English teaching resources has also been improved. Many professional institutions and teacher teams are committed to developing high-quality English teaching resources to meet the needs of students at different levels.

3. Resource sharing becomes possible: Information technology makes teaching resource sharing possible. Teachers can share their teaching experience and resources online, and students can also access high-quality resources from other schools or regions through the internet. Resource sharing promotes educational equity and improves the utilization rate of educational resources.

2. The Problems of Modern Information Technology in English Education and Teaching

2.1 Insufficient interaction between teachers and students

Against the backdrop of the widespread application of modern information technology in English education and teaching, some teachers overly rely on multimedia and online resources, resulting in a significant reduction in direct interaction between teachers and students in the classroom. Teachers may focus too much on the presentation of courseware and the transmission of content, while neglecting real-time communication and feedback with students. This one-way teaching method makes it difficult for students to receive timely guidance and assistance, thereby affecting their learning effectiveness and interest. In order to improve this issue, teachers need to pay more attention to classroom interaction, stimulate students' participation and thinking ability through questioning, discussion and other methods, and ensure that students can truly participate in learning.

2.2 Students have low interest in learning

Although information technology provides abundant resources and means for English teaching, excessive screen learning may make students feel tired and lack interest. Staring at the screen for a long time not only easily distracts students, but may also affect their vision and physical health. In addition, some students may become addicted to online games and social media, losing interest in learning English. In order to stimulate students' interest in learning, teachers need to innovate teaching methods and approaches, such as using gamified teaching, interactive teaching, etc. to attract students' attention and improve their learning enthusiasm. At the same time, teachers also need to pay attention to the interests, hobbies, and individual needs of students, and provide them with personalized learning experiences.

2.3 Resource imbalance

The uneven distribution of information technology equipment and resources among different regions and schools is an important issue facing current English education and teaching. Some developed areas and schools have well-equipped information technology and abundant resources, while some impoverished areas and schools have outdated information technology equipment and scarce resources. This imbalance of resources leads to unequal educational opportunities and affects the quality of English education and teaching. To solve this problem, the government and all sectors of society need to increase investment and support for impoverished areas and schools, improve the popularization rate of information technology equipment and the quality of resources. At the same time, schools also need to strengthen cooperation and communication, share high-quality teaching resources, and improve the quality and level of the entire education system.

2.4 The authenticity issue of knowledge acquisition

In the information age, students can access a large amount of English learning materials through the internet. However, the authenticity and accuracy of these materials are difficult to guarantee. Some unscrupulous businesses or institutions may publish false or low-quality English learning materials to mislead students. To solve this problem, students need to have the ability to identify and filter information, and choose formal and authoritative learning platforms and resources for learning. At the same time, schools and education departments also need to strengthen the supervision and management of online learning resources to ensure the authenticity and accuracy of the knowledge obtained by students. In addition, teachers also need to guide students to use online resources correctly, improve their information literacy and network security awareness.

3. The Response Strategies of Modern Information Technology in English Education and Teaching

With the rapid development of information technology, its application in English education and teaching is becoming increasingly widespread. However, in the face of the challenges posed by modern information technology in English education and teaching, we need to adopt a series of effective response strategies to ensure the effective application of information technology and the improvement of education and teaching quality.

3.1 Improving Teachers' Informatization Teaching Ability

As a key role in education and teaching, teachers' information technology teaching ability directly affects the effectiveness of information technology teaching. Therefore, we need to strengthen teacher information technology training and improve their information technology literacy and teaching ability by organizing teachers to participate in information technology training, seminars, and other activities. At the same time, encourage teachers to innovate teaching methods and actively utilize information technology to explore new teaching methods and approaches, such as gamified teaching and interactive teaching, in order to stimulate students' learning interest and enthusiasm. Through continuous learning and practice, teachers can better integrate information technology into English education and teaching, improving teaching effectiveness.

3.2 Strengthen resource construction and utilization

Resources are an important guarantee for information-based teaching. The government and schools should increase investment in information-based teaching, provide sufficient equipment and resource support. Meanwhile, optimizing resource allocation, through policy guidance and market mechanisms, enables high-quality teaching resources to cover a wider range of regions and schools. In addition, we should strengthen the co construction and sharing of resources, encourage resource exchange and sharing among schools, teachers, and students, in order to fully utilize and leverage the advantages of information resources.

3.3 Innovative teaching modes and methods

Faced with the rapid development of information technology, we need to constantly explore and innovate teaching models and methods. By combining online and offline teaching modes, we can retain the advantages of traditional teaching while fully utilizing the advantages of information technology. In addition, utilizing big data and artificial intelligence technology to optimize teaching management and evaluation processes, collecting and analyzing student learning data, and providing targeted teaching suggestions and evaluation feedback to teachers. This will help teachers better understand the learning situation of students, adjust teaching strategies in a timely manner, and improve teaching effectiveness.

3.4 Strengthen the integration with traditional teaching

While utilizing information technology, we should not overlook the advantages of traditional teaching. Traditional teaching methods have unique advantages in cultivating students' thinking abilities and emotional attitudes. Therefore, in information-based teaching, we should retain the advantages of traditional teaching and combine it with information technology to provide students with a more comprehensive and in-depth learning experience. By integrating traditional and information-based teaching, we can better meet the learning needs of students and promote their comprehensive development.

4. Conclusion

Modern information technology has had a profound impact on English education and teaching. By strengthening the information technology teaching ability of teachers, enhancing resource construction and utilization, innovating teaching modes and methods, and enhancing integration with traditional teaching, the advantages of information technology in English education and teaching can be fully utilized to improve teaching effectiveness and student learning experience. In the future, with the continuous progress of technology and the deepening development of educational reform, the application of information technology in English education and teaching will be more extensive and in-depth.
