Abstract: With the continuous development of information technology, the term Internet has rapidly spread to all aspects of people's work and life. Facing the rapidly developing information network, all walks of life have begun to innovate and merge. And class management should also use the Internet background to build an information platform, which can not only optimize the efficiency of class management, but also achieve a more ideal management effect. This article starts with two aspects of digital management strategy and independent management strategy. Put forward some suggestions on the construction of class management information platform under the Internet background.

Keywords: Internet +; Class Management; Information Construction

The content of school education is not only classroom teaching, but also a series of contents such as class management and activity organization. As an important part of education, class management can effectively cultivate the comprehensive quality of students, optimize the effect of students' moral education, help students form a sound personality and teamwork, and guide students to grow better. As for contemporary students, they grew up in the Internet age. Facing the increasingly developed Internet technology, students have broader channels of information acquisition, have access to an international perspective, and have a stronger desire to communicate and self awareness. At this time, the traditional class management model has been difficult to obtain the recognition of students, nor does it meet the needs of students' physical and mental development. Therefore, in the context of the Internet, we should effectively use information technology to optimize the class management model, establish a class management information platform, and make the class management work diversified and standardized, and ultimately continuously improve the effect of class management.

1. Digital management strategy

Because class management is for all students in the class, the management also involves communication with the school and the family, so the content is relatively cumbersome and complicated, and trivial tasks often make class management seem chaotic. Information technology can sort out and summarize the work of class management, make it more systematic, and realize process-based class management. In this way, the class teacher can devote more energy to teaching, which reduces the difficulty of the work of the class teacher, and prevents the complicated management work from occupying too much time of the class teacher. In addition, teachers can conduct digital information management based on students' conditions, establish a student network database based on students' basic conditions, hobbies, special family information and parent contact information, and update the information in a timely manner, so that it is more convenient for teachers to conduct management

tasks. Information is retrieved and inquired. By thus realizing the construction of a digital platform for class management, dynamic management of student data can be realized. Schools and teachers should incorporate the students' achievements, such as achieving a good ranking in sports activities, and greatly improving their performance, into the student's file information, so as to encourage students and cultivate their sense of collective honor. In addition, performance management through information technology can conduct a comprehensive horizontal and vertical analysis of students' performance, determine whether students have partial subjects, and conduct a more scientific evaluation of student performance, so that teachers can develop targeted teaching and better cultivate the overall quality of students.

2. Autonomous management strategy

2.1 Strengthen the informatization of class culture and enhance class cohesion

The so-called class culture refers to the beliefs, attitudes and values shared by all or some members of the group. The words and deeds of class members, interpersonal environment and class atmosphere are important signs of class culture. The classroom environment, blackboard newspaper, and activity area are the concrete manifestations of class culture. Therefore, for class culture, it includes both team awareness and class spirit. In the process of growth of a class, if there is no common development goal, then both team cohesion and sense of honor will be seriously affected. In the new era, the head teacher should have a certain degree of innovation ability, focus on the combination of new technology and education, promote the transformation of class management mode, and provide a good platform for students to learn and communicate through the construction of class culture, set an example to help students establish good style and habits, and promote the effective connection between students' hobbies and teaching goals.

2.2 Establish class QQ group and class blog to promote interactive communication

On the one hand, good communication can eliminate the estrangement between people, and it can also promote people's enthusiasm and learning efficiency. Therefore, in the process of managing students, effective communication methods should be adopted. The continuous development of information technology has made the network and information technology widely welcomed by students, which has had a huge impact on their lives and thoughts. More and more students are willing to accept new things and like to use information technology to communicate. A lot of practice has proved that combining traditional education with the Internet and establishing a communication platform on the Internet can effectively improve the efficiency of class management. However, it should be noted that the specific communication time, communication content, and communication methods should be coordinated with parents. You can communicate with all students by establishing a class QQ group. For problems existing in student education, teachers can set up class blogs. Provide online answers to students' questions.

3. Conclusion

In the context of the Internet, class management work should also conform to the needs of the development of the times, use the advantages of the Internet to create a new communication platform, use new methods to accumulate class management experience, and carry out related teaching work. Teachers can improve class management capabilities while also promoting the improvement of teaching ability allows students to truly appreciate the significance of the Internet age for campus life, and education under the Internet background can truly benefit students.
