Fund Project: Research on the Development of Vocational Education in Ruian City Based on the Development of County Economy—Taking Automotive Electronic Technology as an Example (ProjectNo: WZYB202020).

---

**Abstract:** With the continuous upgrading of my country's educational concepts, the importance of higher vocational education has gradually become prominent. Based on the current society and enterprise demand for highly skilled talents, higher vocational colleges should actively cooperate with off-campus enterprises to achieve the purpose of integrating production and education to build an education training base.

**Keywords:** Integration of Production and Education; School-enterprise Joint Construction; Higher Vocational Education; Construction of Training Base

---

Attaching importance to the integration of production and education, and building an education training base through school-enterprise cooperation is an important measure to enhance the development of vocational education. It can effectively strengthen the training of skilled and applied talents, allowing students to accumulate rich practical experience and meet the current social and social needs. The needs of enterprises for skilled talents can also cultivate students to form good work and study habits during the training process, which greatly enhances students' future employment competitiveness.

## 1. The role of the integration of production and education and the joint construction of higher vocational education training bases by schools and enterprises

### 1.1 Able to realize the sharing of educational resources

Using the teaching model of integration of production and education and school-enterprise cooperation, the joint construction of education training bases can achieve the effective integration of educational resources and comprehensively improve the quality of higher vocational education. In traditional higher vocational education, the theoretical study and practical training of students are separated. In addition, the funds of their own schools are limited, and it is difficult to provide students with efficient and complete training programs. However, the cooperation between schools and enterprises in the Principality to establish an educational training base is This situation can be effectively improved, the theoretical study of the school and the training of the time of the enterprise can be effectively integrated, the sharing of educational resources can be realized, the comprehensive quality of the students can be maximized, and the students can effectively link theoretical knowledge and practice., To realize the overall improvement of the quality of higher vocational education.

### 1.2 Promote the sustainable development of vocational colleges

School-enterprise cooperation to build a training base is an important way for the development of higher vocational

schools. Schools and enterprises should conform to this teaching philosophy, vigorously promote cooperative teaching, and while ensuring the effectiveness of vocational education, tap the characteristics of local education and make use of practical The advantages of the training base teaching are for cooperative enterprises to train and reserve high-quality skilled talents, and based on cooperation with many enterprises to increase the employment opportunities of vocational students after graduation, to achieve a win-win situation for enterprises, schools, and students, and to promote higher vocational colleges Sustainable development of the school.

## **2. Practical teaching measures for the integration of production and education, and the joint construction of higher vocational education training bases by schools and enterprises**

### **2.1 Develop a sound practical teaching system**

Good and complete rules and regulations are an important prerequisite for realizing school-enterprise cooperation to build a training base. Only when the rules and regulations are improved at the beginning, can the quality of practical teaching be continuously improved. First of all, abandon the traditional practice teaching concept, carry out a comprehensive reform of the practice teaching mode, guide students to integrate into the actual working environment, and make preparations for all aspects of teaching in advance, so that there is a tacit cooperation between the enterprise and the school teaching. Secondly, students should follow the company's own rules and regulations during the learning process of the training base, adhere to the safety operation specifications, and ensure the safety of themselves and the training equipment. Finally, a long-term and effective cooperation agreement should be signed between the school and the enterprise to ensure that students can have sufficient training opportunities within the training base, avoiding the suspension of student training opportunities due to some unexpected changes and reducing the effectiveness of training training.

### **2.2 Further improve the teacher allocation plan**

Teachers' professional ability and teaching level are the prerequisites for ensuring the effectiveness of students' practical training. Therefore, the school should formulate a complete teacher allocation plan to ensure the effectiveness of practical teaching. First of all, in the process of school-enterprise cooperative teaching, companies should arrange some employees with excellent work experience and outstanding ability to teach in the school according to the teaching requirements, mainly to teach students the practical operation, and to provide targeted teaching guidance to the students. Secondly, school teachers should effectively interact with enterprise employees, cooperate with each other to complete practical training, and perfectly combine theoretical knowledge with practical operations to enhance students' comprehensive practical ability. Finally, we should strive to meditate on a group of teachers with "dual-teacher" qualifications to further enhance the effectiveness of teaching and lay a solid foundation for the improvement of students' practical ability.

## **3. Conclusion**

The combination of production and education and the school-enterprise cooperative teaching mode are important methods for the development of higher vocational schools. Schools and companies should jointly build a training base to improve students' practical operation ability, combine new teaching concepts and teaching methods, and combine theoretical knowledge with practical operations. Perfect combination, comprehensively improve the comprehensive literacy of students, oriented training and reserve required talents for enterprises, increase the employment rate of students in higher vocational schools, and realize the sustainable development of higher vocational schools.
