Abstract: With the advent of the new era, the content of education reform is constantly changing, and at the same time, more emphasis is placed on cultivating students' craftsmanship in order to cultivate advanced talents that meet the development requirements of the new situation.

Keywords: Advanced Talents; Higher Vocational Education; New Era Development; Craftsman Spirit

As an important base for cultivating professional and skilled talents in our country, higher vocational colleges must integrate the continuous changes and development of the times under the background of the new situation and regard cultivating students' craftsmanship as an important school purpose. This can not only cultivate skilled, innovative, professional, and knowledge-based labor talents that meet the requirements of the new era, but also effectively promote the spirit of model workers, and guide students to establish a correct attitude of professionalism in the process of education, thereby promoting important developments in various industries. This requires teachers in colleges and universities to conduct in-depth analysis of the current obstacles to cultivating their craftsmanship based on the actual situation of higher vocational students in order to effectively ensure the high-quality development of education. Therefore, how to effectively improve the craftsman spirit of students under the new situation is the main problem of this article.

1. Obstacles to the cultivation of craftsman spirit in higher vocational colleges

1.1 Outdated talent cultivation concept

When schools are formulating talent training goals, they often take how to train students' professional abilities as the key teaching direction, which leads to the lack of attention to the cultivation of students' craftsmanship and the inability to achieve effective training results. In addition, because vocational students are young and students are in the stage of dual development of speculative consciousness and behavioral consciousness, if students want to obtain comprehensive development, teachers need to be able to combine the development requirements of the times and guide students in a targeted manner establishment of value concept.

1.2 Student craftsmen are weak

Many higher vocational colleges not only set low entry thresholds when recruiting students, but also have a very wide range of recruiting students. This has caused many higher vocational students to be affected by their own behavioral awareness, growth environment, learning level and knowledge reserves. Generally, they will focus their learning energy on professional

knowledge and improving professional level, and rarely realize the importance of craftsmanship to their future development. In the case of student craftsmanship with low spirits, not only is it difficult for students to mobilize their learning enthusiasm, but also in the process of lack of humanistic quality and value heritage, it is difficult to make their own values and concepts meet the requirements of future industry development. Therefore, in the context of the ever-changing development of the new situation, various industries also have higher requirements for recruiting talents, and hope to recruit high-level talents with the spirit of craftsmanship and innovation.

2. The concrete ways of cultivating craftsman spirit in higher vocational colleges in the background of new situation

2.1 Learn the new concept of talent cultivation

In order to enable higher vocational colleges to promote the cultivation of craftsmanship in an orderly manner, schools need to abandon outdated talent cultivation concepts, actively integrate the development background of the times, and innovate their own educational goals, in order to find effective teaching methods and encourage. Under the guidance of the craftsman spirit, students can establish correct three views and a sense of speculation, so as to grow into high-quality talents that meet the requirements of the future development of society.

2.2 Actively promote the school-enterprise cooperation model

In view of the low craftsmanship of many students, higher vocational colleges need to actively promote the school-enterprise cooperation model, cooperate with well-known enterprises in the region, and jointly develop corresponding professional curriculum systems based on the future development prospects of different majors, improve talent cultivation plan, plan teaching standards and strengthen professional construction. At the same time, teachers also need to encourage students to use a broader platform of practice, not only to ensure that the knowledge they have learned can be used, but also to be able to subtly realize the importance of the craftsmanship to their own better development in the actual work position. In the process of continuous improvement of professional love, we can down-to-earth to improve our professional skills, thereby ensuring the correct establishment of craftsmanship. In addition, under the guidance of the school-enterprise cooperation model, students can have a closer understanding of the talent standards, rules and regulations and job skills of actual jobs, so as to continuously accumulate professional experience in the participation of practical activities, improve work skills, and enable themselves. In the future employment work, we can have a strong competitive strength and lay a solid foundation for better development in the future.

3. Conclusion

All in all, through the improvement of students' craftsman spirit, higher vocational colleges can guide students to ensure the smooth completion of various activities under the guidance of craftsman spirit when studying and working, and can continuously improve themselves and have the correct working spirit. As well as the value concept of craftsmen, they will gradually become the advanced talents required by future industry development. This requires higher vocational colleges to grasp the individualized development, speculative consciousness, age characteristics and growth needs of higher vocational students when carrying out educational work, and to innovate the content of craftsmanship cultivation in a targeted manner. This will not only enable students to obtain a more comprehensive development, but also enable students to always complete their work and study with an attitude of excellence under more stringent standards, and then grow into outstanding talents under the background of the new situation and better for the future of the motherland development contributes its own strength.
