---

***Abstract:*** At the current stage, as a bridge to guide students to study, explore, and learn excellent traditional culture, the library itself undertakes many basic functions of education. At the same time, the vocational library is also a direct reflection of the comprehensive educational ability of a college, which indirectly reflects the level of school civilization of the college, and represents the spiritual and cultural heritage. In the current era of fragmentation, the flood of fragmented information has led to an increase in students' reading, but lack of in-depth learning and precipitation. Throughout the ages, libraries have carried cultural heritage, and it is necessary for higher vocational colleges to have a library. However, how to do a good job in reading promotion and how to reasonably arrange the construction of library space are issues that will be discussed in depth in the text.

***Keywords:*** Space Construction; Library Construction; Cultural Promotion and Dissemination

---

## **Introduction**

The development of the Internet age has brought about a new form of reading promotion, and fast-food and jumping online reading is very popular. As a traditional reading form, the library is bound to receive the impact of the times. How to do a good job in the space construction of higher vocational libraries and how to do a good job in reading promotion under the current background is a problem that higher vocational colleges face together. Higher vocational libraries need to keep pace with the times, undertake the ability of cultural education, keep up with national policies, and do a good job in the construction of higher vocational library space from the perspective of reading promotion.

## **1. The Significance of Constructing the Space Construction of Higher Vocational Libraries from the Perspective of Reading**

In the era of rapid development of the Internet, the popularization of mobile phones and the new media reading in the new situation are the mainstream of current reading. Fragmented and information-based reading excludes the original reading space. There have been obvious problems with fragmented reading: too fragmented and shallow, not deep enough to provide people with deep learning and reading. Moreover, under the new media reading environment, the reading space has changed from the original library, quiet room, classroom, etc. reading environment to subway, restaurant, road... Therefore, a new type of reading space in higher vocational libraries is established to create a box of quiet and suitable reading environment is necessary. When vocational students are accustomed to using mobile phones to obtain information, the construction of library space should be put on the agenda. In a specific reading space, systematic and integrated reading, reading, research and other learning activities will greatly benefit the learning of higher vocational students. By creating a quiet reading space, it can help higher vocational students calm down and accumulate knowledge in the prosperous era, help higher vocational students absorb professional knowledge more efficiently, and digest what they have learned in the classroom.

## **2. Analysis of some problems existing in space construction in higher vocational colleges**

At present, there are still some difficulties in the construction of library space. Many higher vocational colleges do not have a clear understanding of the main body of the library's spatial environment. When designing the space of higher vocational libraries, many colleges usually pursue the efficiency of space use blindly. The layout design causes students to waste too much time looking for the professional knowledge books they need. The interior space environment of the library also needs to meet the needs of people's comfortable environment. A good reading atmosphere can create a better group reading space. When designing library space, many institutions do not determine the design theme of the library, nor consider the actual needs of students. For example, a higher vocational college with a majority of liberal arts majors determines the theme of "science and technology" in the library, while a higher vocational college with engineering and science as its main design theme uses "philosophy and history" as its design theme. Therefore, higher vocational colleges should try their best to avoid blind design in the construction of libraries, and should carry out rational design in line with higher vocational colleges and the surrounding environment. When building the internal structure of the library space, the opinions and needs of the majority of students and teachers should also be collected, so that the needs of students and teachers can be met after the library is completed.

### **3. Analysis of countermeasures for the construction of higher vocational library space from the perspective of reading promotion**

#### **3.1 Establish a library digital platform and establish a new reading promotion model**

The creation of the library's digital platform conforms to the trend of the current era. The traditional mode of reading promotion is too simple. Compared with the traditional mode, the new media communication in the Internet age is more efficient, integrated and convenient, which greatly saves the need for books. The library uses the student's time. The digital platform has strong data processing, research, integration and analysis capabilities. The establishment of a library digital platform uses the 'Internet +' model proposed today. For example, if students need to study in the library, they can use the library's digital platform. Inquire about the required subjects. To establish a library digital platform and establish a new reading promotion model, it is necessary to clarify the main positioning of library space. The establishment of a library digital platform needs to clarify the goals and needs, and integrate resources through a wide range of data. On the establishment of a digital platform, higher vocational colleges can hire relevant experts to design. When using the new reading promotion model, the school can create a public account of the library of higher vocational colleges to guide students to pay attention. Read effectively in this new medium, and improve the efficiency of reading through this form.

Many higher vocational colleges have begun to build digital libraries one after another, accumulating a lot of defects and experience, and creating a corresponding system evaluation model. By establishing a new library model, it provides a new idea, which is a good innovation and can greatly improve the service level of the library. It can participate in the actual reading process of students, and further improve students' ability to use writing and reading. As a new type of reading form that expands new media, it plays an important role.

#### **3.2 Establish a perfect open reading space in the library**

The main function of the vocational library is to provide a convenient space to help students provide school space when they need it. There is no limit to reading, but in the learning stage of higher vocational education, the students at this time are at the best age, so the establishment of a good It is necessary to help students learn in the form of library space. For reference to the current popular 'bright kitchen and bright stove', the open kitchen, the library draws on and applies its model to establish an open reading space. In vocational colleges, when vocational students pass by, they can see books In addition, the semi-open library reflects the confidence of a vocational college in the library. The open reading space of the library is essentially an offline reading promotion method, which is carried out by the library itself. When establishing an open reading

space, certain requirements are put forward to the main body of the building. When designing the spatial structure of the library, it is necessary to measure what the semi-open library needs to reveal. When building a semi-open space in the library, it is necessary to consider the sunlight and the flow of people. As far as possible, the location with the largest flow of people and the richest literary and cultural atmosphere in the library is designed as an open reading space. It has great cultural benefits for a vocational college to attract high vocational students who come and go, and cultivate a silent learning atmosphere. At the same time, when establishing a semi-open library reading space, the library should also be closed for reading. The construction of space helps students who need to study in a quiet environment to find a suitable study position in the semi-open library.

### **3.3 According to the needs of students, rationally construct the internal space of the library**

Good reading efficiency requires the creation of adequate reading conditions. The improvement of students' reading literacy depends on the actual content of books. Reading literacy lies in students' understanding and tolerance of a book. The library should provide more meaningful books for reading. In the layout of library space, it should also be sorted according to the depth of books and the relevance of professional books. When reading through the library, students can use their language and writing skills to understand the content of books, enrich their knowledge, and cultivate their reading literacy. Through reading to learn, to increase professional knowledge, and in the process of participating in the daily group reading space of learning, there is more sense of participation. Therefore, it is necessary and inevitable to build a reasonable and comfortable interior space of the library according to the needs of students. This can not only improve the utilization rate of library buildings, but also help vocational students in higher vocational colleges have a better environment for self-study, reading and learning. Reading space is a group space, and the focus is on groups. As a reading space with a broad group audience, the library should follow certain rules of space construction. In order to improve the utilization rate of books in the library, higher vocational colleges should ensure that three requirements can be provided in the process of integrating space: one is to provide a learning environment for teachers and students together, and the other is to integrate resources. In the process, readers can find suitable books according to their own needs. Third, the library can provide more advanced professional books.

## **4. Conclusion**

All in all, through more advanced modernization concepts, innovate the old library setting mode, reasonably construct the reading space structure, pay attention to humanization, comfort, and flexibly change the space layout. Through the organic combination of online promotion and offline activities, the library's reading promotion model and the new media model are further organically combined, so as to improve more outstanding students in higher vocational colleges and help students to be rich in cultural heritage. But at the same time, we should also pay attention to avoid the problem of ambiguous positioning of the theme of the library environment, and do a good job in the promotion of the library and the establishment of space construction, so as to explore a road that meets the needs of the times in practice.
