Abstract: Under the new situation, my country is actively carrying out the reform of the education system and actively implementing the teaching concept of quality education. Red resources are important educational resources in our country, carrying our excellent traditional culture and the crystallization of the spirit of our times. While innovating traditional teaching concepts, colleges and universities make full use of red resources to carry out ideological and political teaching, fully reform traditional teaching ideas, clarify the goals of ideological and political teaching, gradually improve the quality of ideological and political teaching in colleges and universities in my country, and cultivate a new generation in line with society. The needs of the age of youth. Based on this, this paper mainly analyzes the innovative methods of ideological and political teaching in colleges and universities based on Hebei red resources, so as to better achieve the teaching goals of ideological and political courses in my country.

Keywords: Red resources; College teaching; Ideological and political teaching

Fund Project: Practical research on the integration of Hebei red resources into the teaching of ideological and political courses in colleges and universities.

Subject source: school-level subject.

1. The relevance of integrating red resources into the teaching of ideological and political courses in colleges and universities

1.1 Red resources provide correct guidance for the teaching of ideological and political courses in colleges and universities

First of all, red resources can provide correct theoretical guidance for the teaching of ideological and political courses in colleges and universities. By organically combining red resources with ideological and political courses, college teachers can effectively standardize the content of ideological and political teaching, improve the quality of ideological and political teaching in colleges and universities, and enable colleges and universities. The direction of ideological and political teaching is more scientific and rational. Red resources carry the excellent traditional culture of our country, and the theoretical content is very rich, including not only the achievements of the international communist movement, but also the famous ideas left by proletarian revolutionaries at home and abroad.

Secondly, the integration of red resources into the teaching of ideological and political courses in colleges and universities can provide a clear orientation. Carrying out ideological and political education on the basis of red resources can enable students to clarify the correct political position, clarify their own position, make correct judgments on social development and the international situation, and deepen students' understanding of party-related theoretical knowledge. Let students form correct values. Secondly, the effective integration of red resources into the teaching of ideological and political courses in colleges and universities can enable ideological and political courses to have a strong spiritual core, understand communism, and cultivate young people in the new era on the basis of red resources, so that students can Having a correct understanding of communism and having a correct

cognition of the position of communism can further promote the all-round development of students and achieve the goal of college teaching in our country^[1].

1.2 Red resources and ideological and political courses in colleges and universities are in the same line in spirit

my country's red resources have rich spiritual and cultural connotations, and are the crystallization of the fine tradition of our party and the 5,000-year fine culture of our country. Through the arduous revolutionary war, our country has achieved the goals of national independence, common prosperity, and national prosperity. Therefore, college teachers should pay attention to excavating red resources, carry out new ideological and political courses with red resources as the carrier, establish a clear political position, and carry out ideological and political education in colleges and universities based on red resources, so that college students can establish correct ideological concepts, It can make college students have the correct spiritual awareness, have high ideals and beliefs, can correctly judge right and wrong, and find the correct life direction. Secondly, taking red resources as the entry point of ideological and political courses can make college ideological and political courses combine theoretical knowledge and spiritual training, and can make college ideological and political courses truly meet the needs of society and the development of the times, and can integrate correct ideological concepts. It is integrated into the brains of students, so that students can generate correct ideals and beliefs that are consistent with social development in spirit.

1.3 Red resources and college ideological and political courses complement each other in education

First of all, red resources can effectively enrich the teaching content of ideological and political courses. The ideological and political courses in colleges and universities mainly describe the specific combination of the Communist Party of China, the basic principles of Marxism and China's reality, and mainly describe the development path of our country. The teaching content is relatively rich and the teaching purpose is relatively clear. However, when some colleges and universities carry out the teaching of ideological and political courses, the teaching method is too simple, the teaching content is relatively boring, and the theoretical knowledge is too professional, which makes it difficult for students to understand and accept. Therefore, colleges and universities should focus on innovating the original teaching methods, using red resources as the starting point, changing the traditional teaching content, changing students' traditional inherent concepts of ideological and political education, and continuously enhancing the interest of ideological and political courses in colleges and universities. In addition, ideological and political courses can spread red resources through teaching and inherit excellent culture. It is necessary to make good use of red resources and carry forward red genes. By carrying out ideological and political courses, the dissemination channels of red resources can be broadened, and ideological and political courses in colleges and universities can be used as red resources. new method^[2].

2. Measures to integrate red resources into ideological and political courses in colleges and universities

2.1 Strengthening red resource politics and carrying out narrative comprehension teaching

Under the new situation, colleges and universities must actively carry out the reform of the teaching system, and actively innovate the traditional inherent teaching methods. When carrying out the teaching of ideological and political courses, the method of narrative comprehension teaching can be used to focus students' attention, and college teachers can use representative events. Based on the analysis and discussion with the students, the ideological resonance with the students will be generated, and the students' cognition of the red resources and their own emotions will be strengthened, thereby promoting the dissemination and promotion of the red resources. In addition, red resources have a strong red gene, each red resource and red site has a different cultural background and historical background, all contain a moving cultural history, and all embody the great revolutionary spirit. The heroes in the ruins can be used as materials and resources for ideological and political teaching, and can be used as excellent cases of narrative comprehension teaching. Therefore, college teachers can fully explore the historical stories behind different red resources, and tell the historical stories in the ideological and political courses of colleges and universities, so that students can understand the historical background of different red resources based on their own real life, and improve students' recognition of red resources. In order to cultivate students' ideological awareness in the process of telling historical events, carry forward and practice the core values of socialism in our country^[3].

2.2 Integrate red resources to carry out integrated practical teaching

Many college teachers pay attention to red resources and begin to integrate red resources into the teaching of ideological and political courses. However, some teachers have a relatively simple method in the process of integrating red resources, resulting in

scattered teaching content of ideological and political courses and unable to concentrate students' attention. The knowledge received by students is too scattered, which will affect the learning effect of students to a certain extent. When explaining the course content, some teachers only explained the red story alone, but did not organically combine the red story with the theoretical knowledge of this class, resulting in students only listening to the story case, but not learning professional theoretical knowledge. In order to improve students' interest in learning and increase students' learning experience, some teachers carry out red resource practice activities and lead students to visit red resource scenic spots. However, many colleges and universities only carry out sightseeing activities and simply visit red resources without truly realizing the experience. The teaching objectives of social practice activities were not achieved. After the activities, the students' awareness of red resources was not high, and the teaching objectives of ideological and political courses in colleges and universities were not really realized. Some teachers only pay attention to talking on paper, only impart basic theoretical knowledge, and have not carried out practical experiential teaching, resulting in students' low learning attention and low learning initiative. Therefore, college teachers should fully tap red resources, take red resources as the main entry point, carry out practical experiential teaching, and take practical activities as an important part of the teaching of ideological and political courses in colleges and universities. The goal of ideological and political teaching in colleges and universities.

2.3 Establish an ideological and political teaching platform and carry out online media interactive teaching

Under the new situation, my country's science and technology continue to develop, and my country's Internet technology is continuously applied to college teaching classrooms. College teachers should pay attention to the auxiliary functions of multimedia equipment, enrich the network of red resources, and carry out online teaching. Ways to innovate the teaching content of ideological and political courses in colleges and universities, and improve the quality of ideological and political courses in colleges and universities. College teachers can use network technology to establish a red resource display platform, and display the historical background and picture information of red resources on the network platform, so that students can understand the historical background of different red resources through keyword search. At the same time, teachers can also add interactive functions on the network platform, through the network platform to timely understand students' learning situation, timely clarify students' feedback information, and timely collect students' learning dynamics of red resources, which is conducive to the development of targeted teaching, so that Teachers' teaching content is more in line with the actual needs of students. Secondly, college teachers can actively study and use red resource courses on online learning platforms such as MOOCs. They can introduce online course resources through multimedia devices, and introduce online courses into the teaching of ideological and political courses in colleges and universities, so that students can learn about red resources in time. related courses, and the learning results are included in the final assessment results. By combining red resources, online teaching, and in-class education, the teaching network of red resources will be broadened, and the connection and interaction between teachers and students will be strengthened through the network platform, so that teachers can Check the students' learning progress in time and understand the students' learning status, so as to effectively improve the teaching progress of the ideological and political courses in colleges and universities, and truly combine the red resources with the ideological and political courses in colleges and universities. For example, college teachers can input relevant information such as Langya Mountain and the Martyrs Cemetery of the North China Military Region into the network platform, and clarify the historical background of red resource scenic spots such as Yeshanpo, and explore the revolutionary stories behind different red resources, so as to clarify The teaching theme allows students to collect relevant information about Hebei's red tourism resources by searching keywords, which will not only help speed up the teaching progress and achieve the teaching goals of ideological and political courses, but also broaden students' knowledge and integrate red resources, so that students can Obtain more information in the network platform, and gradually improve the ideological realm of students.

3. Conclusion

To sum up, under the new situation, my country's colleges and universities should actively carry out education system reform, effectively integrate red resources into the teaching of ideological and political courses in colleges and universities, change the traditional single and fixed teaching method, and take red resources as the main entry point. , clarify the teaching goals of ideological and political courses, clarify the correct value orientation, so that students can establish correct values through ideological and political courses, strengthen students' sense of responsibility, let students have a clear and correct understanding of red resources, and truly understand what red resources are to convey. In order to provide a steady stream of young people in the new era for social development, gradually improve my country's competitiveness and promote my country's economic development.
