Abstract: As human beings enter the Internet age, browsing a variety of websites, blogs or apps occupies an increasingly high proportion in People's Daily life behavior, website design, development skills have become the era of high ranking skills of the learning field. However, with the integration of multiple cultural propaganda, students' way of thinking is more and more influenced by multiple cultures, and the training tasks of thinking guidance, values and patriotism in all kinds of courses have become more important than before. Therefore, it must be combined with ideological and political process in the course of teaching. This paper briefly analyzes the importance of the combination of ideological and political courses and website courses, and analyzes the integration of ideological and political courses into website courses, in order to play a supporting role in the smooth implementation of website courses.

Keywords: Curriculum ideological and political; Website courses; Into the element

Introduction

The teaching of computer major can better cultivate students' ability to use computer technology and provide more information technology talents for the development of various fields in the new era. Talents should be having both ability and political integrity, however, in order to better implement site class teaching, how to combine education and teaching content become a new subject in the construction of the curriculum design, and it is also the social demand for educators to social responsibility, improve the professional quality of students and improve their humanity character, legal consciousness, political quality, etc., so as to meet the development requirements of the new era to promote their all-round development.

1. The value of combining ideological and political elements with website course teaching

1.1 Network technical personnel support for social development

An important goal of education is to cultivate all-round talents and provide sufficient human resources for social development. The integration of ideological and political elements into the teaching of website courses can cultivate students' "three views", improve students' innovation ability, enhance students' sense of responsibility in the study of professional courses, so as to promote students' growth.

1.2 College computer technology personnel training that can better adapt to the needs of modern society

Computer technology and network technology have developed rapidly in the new era. Computer and network have become the core of the development of human society, and the virtualization and openness of network also play a great role in the development of human society. Online platforms can provide people with channels to collect information, facilitate people to communicate, improve work efficiency, and enrich people's spiritual life. But it also has its shortcomings, for example, many students are addicted to the Internet and unwilling to study; Criminals use the Internet to commit fraud and seek personal benefits, endangering the lives and property of others; Virus invades the network data to be destroyed and so on. Computer teachers should play their part, guides the

student to set up the correct thought, knowledge network is closely linked with the daily life, standard network application, develop good habits of network application, develop good network application ability, to develop good network culture quality, from the perspective of dialectical analysis of the relationship between network and people's life, fully embodies the superiority of computer technology[Kang Lijuan & Zhang Anti earthquake, 2022].

2. Integrating strategy analysis into website courses

2.1 Reasonably excavate patriotism in network teaching

In the course of teaching, teachers should combine patriotism education with all aspects of education. This requires teachers to make full preparation before the lecture, from the history of computer development, computer applications and other aspects of the start, discover the patriotic feelings contained in it, cultivate students' self-confidence, enhance students' cultural confidence. Although our computer started late, but through the long unremitting efforts of Chinese scientists, has achieved certain achievements, and has aroused the international community's extensive attention. Therefore, the teacher must guide the students correctly in computer education, let the students understand the rapid development of Chinese computer industry.

2.2 Reform education methods

In teaching, we should constantly innovate the original teaching methods, stimulate students' interest in learning and cultivate students' ability to raise and solve problems through case teaching, problem teaching and group teaching. For example, when introducing network security, teachers will ask students to discuss whether viruses will endanger their data security and how to deal with them. When TEACHING ABOUT SOFTWARE, students SHOULD UNDERSTAND THE development AND development of software and the similarities and differences between human growth and development. The development of good software must have clear guidance and correct methods, and to become the talents needed by the society, it must have the guidance of the "three views". In the process of developing software, ideological and moral education should be incorporated into the concept of software development so as to improve the ideological and moral quality of students and train them to become talents to meet the needs of social development. When setting up the website course, we should adjust the ideological and political factors related to the course properly, so as to improve the teaching quality and promote the all-round development of students. Ideological teaching results and methods of curriculum content, teaching method, have close relations, it is the active adoption of case teaching method, guide students in thinking, in the form of case especially combined with the case of ideological education and political cases, strengthen students patriotic, dedicated, the good faith, establish the ideal faith, ascension home countries feelings, to strive for the construction and development; 2 it is to explore the modern education method, the teaching resources such as online video collection and sorting, strengthen the education teaching, and make full use of super star learning platform for online hybrid teaching way, break the offline teaching space and time limit, take the student as the main body, improve the effect of professional course of ideological education; Third, the task-oriented teaching method cultivates students' sense of responsibility, team spirit and professional skills through task allocation and teamwork, and strengthens collective sense of honor and professional ethics to lay a solid foundation for students' development.

2.3 Improving network hardware and software facilities

Starting from the actual computer education needs, combined with the professional knowledge and skills of the computer, we should reasonably choose the network software in the teaching, as far as possible to choose domestic software, so as to avoid the long-term use of foreign software and cause the misunderstanding of domestic network software. To a certain extent, the ideological and political education and network teaching combined to create a suitable learning environment for students, so as to improve students' understanding of computer technology.

2.4 Adhere to the correct concept of network teaching

In the teaching, we should fully realize the content of network teaching, the operating basis, the value of publicity, at the same time, we should consider the standard, network to work, life influence, to carry on the system and comprehensive analysis. With the help of network technology, information can be collected more efficiently. The stability and safety of the network cannot be separated from the norms of the network. Therefore, in the process of education, teachers should guide students to establish correct concepts, clear ideological and political knowledge in the information environment, so that students can better use their knowledge. Under the network environment, we should combine ideas and information values organically. The use of network information, recognize their responsibilities, adhere to their own position, the relationship between the network and the network more clearly, and a number of websites to cooperate, fully embodies the value of ideological and political ideas, so as to provide a strong support for students'

ideological and political quality education work[Zhang Chengjiang, 2021].

2.5 Conscientiously implement ideological and political education

To integrate ideological and political elements into computer teaching, we must put ideological and political education into practical work, make the curriculum system of computer major more perfect, and integrate the contents related to ideological and political. Under the guidance of "ideology and politics", the students' knowledge is summarized, the teaching implementation plan is clarified, and the professional skill level is improved. According to the actual situation, the students are divided into different groups to improve the comprehensive quality of students. In the process of implementing computer industrialization, we must carry out ideological and political education scientifically. Under the guidance of ideological and political education concept, we should take corresponding countermeasures to improve students' knowledge reserve and ability.

2.6 Improve the construction of teaching staff of ideological and political courses

To organically combine ideological and political elements with computer teaching, so that it is closely combined with the teaching content, we must communicate with computer professional teachers, ideological and political teachers, make clear the course ideological and political mode, development goals, methods, and so on, and make suitable for their own teaching plans. In THIS process, ideological and political teachers should constantly improve their comprehensive quality, master the network technology, master the use of network technology, master the operation requirements, find the key to teaching, to ensure the smooth progress of ideological and political courses. The role model effect can better stimulate the enthusiasm of students, encourage students to participate in learning actively, reach a consensus in thought and emotion, and self-restraint consciously. In the network teaching, the network police can be invited to educate the students, and interview them, and analyze the advanced cases, so as to improve the students' ideological and moral character. At the same time, it is necessary to strengthen the spirit of hard struggle and unity and cooperation of students, raise their high standards for themselves, and ensure the development of students in the future.

3. Conclusion

The advantages of integrating ideological and political elements into website courses are more prominent, which can be used as a supplement to the courses, improve the effect of ideological and political education, and promote the all-round development of students. The ideological elements into the computer professional, should not only fully consider its own characteristics, and should take the ideological concept, their learning attitude, professional ability, and many other factors, and the ideological education and computer professional each link organically, help students to establish the "through", improve the ideological and political quality, create a better environment for its future development, Let students better adapt to the development of society.
