Abstract: With the continuous development of China's economy and the continuous progress of science and technology, China has entered a new era of information age under the background. Our Party school education and teaching methods should also be updated and reformed with the development of The Times, using the Internet teaching advantages, so that more Party members through convenient learning methods to train and learn. Based on this, this paper discusses how to use Internet information technology to reform and innovate the current educational mode of Party schools, expecting to promote the learning effect of Party members and cadres.

Keywords: Internet Plus; Party school; Reform of teaching

Introduction

As a place for cadres at all levels to train and study, Party schools have certain particularity compared with other educational institutions. However, the current development of Internet technology provides an opportunity for Party school education reform, but it also puts forward a higher standard for Party school education. Therefore, the Party school must follow the development of the Internet education innovation, so as to give play to the training of Party members and cadres and improve the ideological consciousness of the role.

1. The significance of “Internet Plus” for Party school education

The effective combination of the Internet with the Party school education can not only make the Party school knowledge imparts vitality, but also stimulate students' interest in learning. Party schools should find educational opportunities and fully implement actions to reflect the importance of Party school education^[1].

At the same time, the Party school uses the Internet to train and study Party cadres, which is not only conducive to the convenient learning of students, but also can effectively improve the in-depth teaching of Party school education, and contribute to the Party school education, and consolidate the foundation of education. And this new way of education can attract more Party members and cadres to actively participate in the education work of the Party school. In order to give play to the excellent characteristics of each party member, accelerate the construction of Party school education, so as to further carry out Party school education, from the theoretical guidance, activity organization, to promote the development of Party school education.

2. Problems facing Party School education at present

2.1 Educational content is divorced from reality

In the course of Party school education, there exists the problem that educational content is divorced from reality. The main task of Party schools is to train party members and cadres, but in the process of practical education, teachers attach too much importance to theoretical knowledge, which is out of touch with the actual life of each party member. Thus it is difficult to achieve the desired effect. In the Party school education, a lot of knowledge content is related to national development and social development, but many teachers in order to avoid Party members and cadres to one-sided understanding of knowledge, put most of the time on the theoretical knowledge, and the actual life of the party members disconnected, resulting in the theory can not be effectively implemented in practice.

In addition, most teachers give priority to theoretical teaching, thus ignoring the leadership of Party members. In addition, as the main body of the classroom in teaching, Party members can only follow the teachers' ideas to record and understand, leading to poor learning effect of Party members, boring classroom atmosphere, unable to achieve significant training effect.

2.2 Lack of teachers

Because of the particularity of Party school education, the teaching staff is seriously insufficient. Part of the reason is that, due to the particularity of Party school education, most of the time there are senior party members with seniority to impart experience to new party members, but because of the level gap between senior party members and professional teachers, the education effect is not good; In addition, because the old party members are older, the ability to accept new things is weak, for the old Party members, can not really use the Internet to carry out Party school education. As a result, Internet-based education reform cannot be fully implemented [2].

3. “Internet +” for the Party school education reform strategy

3.1 Building an “Internet Plus” Party school education platform

In the new environment of the Internet, in order to reform and innovate in a new mode, Party school education should not only set up new educational ideas and guidelines, but also summarize and think about the previous education and teaching based on this, so as to take its essence and discard its dross, promote the better development and inheritance of Party school education, so as to truly combine with the Internet and achieve common development.

3.2 Improve the awareness of Party cadres and Party school teachers on the Internet

Nowadays, with the continuous progress of science and technology, it is the traditional law of natural development that new things replace the old things. Therefore, it is the general trend that the Internet teaching model replaces the traditional teaching model. The Party school must improve the reasonable cognition of the Party members and teachers on the Internet, so as to effectively improve the quality of the Party school education.

3.3 Use the Internet to collect rich educational resources

In the process of the combination of Internet and Party school education, education should make use of the advantages of the Internet to actively collect more comprehensive education resources for Party cadres, so as to create an efficient education model, give full play to the advantages of the Internet, provide Party school cadres with independent learning conditions and opportunities, and improve the learning efficiency of Party cadres. Teachers can collect more comprehensive education and teaching contents through network platforms, such as Super Star learning platform or major libraries, and integrate and analyze them to extract new teaching contents and educational thoughts, so that Party school cadres can have a profound and comprehensive grasp of Party and government thoughts and Party knowledge. In addition, the party school teachers should implement educational activities, the content of education repeatedly, so as to select more appropriate training courses for the Party cadres, the Party's educational policy publicity in place, play the Party school propaganda of the Party's theory of the main front role, fully improve the level of Party school education.

When Party school teachers use the Internet to develop rich educational content, they can integrate the more attractive education courses on the Internet with the courses of the Party school, so as to improve the efficiency of education. Teachers can integrate current affairs news, educational videos, warning videos into the education curriculum to add luster to the teaching of the Party school, and can also combine the educational content with our Party's current educational guidelines, laws and regulations and current policies, so that Party members and cadres can fully implement the current social policies in the learning process, and promote the effective development of Party school education. In addition, Party school teachers can also record micro lessons and videos, so that more Party members and cadres with the help of mobile phones, computers and other scientific and technological equipment, online learning of our Party knowledge, improve the level of Party school education.

3.4 Online and offline education for Party officials

With the rapid development of the Internet, Party school education should also keep pace with The Times, and make use of the convenience of the Internet to create an online + offline education model for Party members and cadres, so that Party members and cadres can carry out knowledge learning at any time and anywhere.

In the process of building the online + offline education model, the Party school should actively introduce Internet equipment and information means. Provide study and work support to Party members, teachers and cadres to the greatest extent, and constantly enhance their working ability. At the same time, in online + offline teaching, teachers should learn new ideas, integrate new ideas, and use various teaching methods to teach Party members and cadres, so that Party members and cadres can better deal with emergencies

and minimize the economic losses of the masses, so as to make the online + offline education model more attractive. Let party members and cadres feel the charm of Internet teaching, so as to carry on a deep understanding of knowledge. In addition, the Party school should actively improve the Internet education, constantly upgrade the education platform, to optimize the platform, in order to promote the learning effect of Party members and cadres. Constantly improve the teaching content, further enhance the level of Party school education.

3.5 Conduct online education evaluation and adjust educational policies accordingly

Party school education should develop an adequate educational evaluation mechanism for Party members and cadres, which should not only carry out reasonable evaluation, but also carry out long-term tracking analysis, so as to improve the quality of Party school education^[3]. However, under the traditional education mode, the offline education evaluation of Party schools has some shortcomings, which cannot make good use of data and information for detailed analysis, and it is difficult to ensure the objective and accurate evaluation. Therefore, Party schools should establish an objective and reasonable educational evaluation mechanism for Party members and cadres, which should not only integrate statistics of the class duration, learning status and class notes of each Party member, but also make a comprehensive analysis of the evaluation. Moreover, it is necessary to conduct objective and sufficient data analysis for Party cadres in the way of in-class test and final examination, so as to evaluate the learning effect of Party cadres according to these data, which more reflects the scientific, accurate and objective learning of Party cadres. In addition, teachers should also analyze and sort out their own educational objectives and teaching results, so as to find out the shortcomings and mistakes in teaching. In order to timely adjust the educational policy, optimize the teaching methods, the use of diversified teaching methods to carry out the training of Party members and cadres. Thus promoting the development of Party school education, enhance the learning effect of Party members and cadres.

Conclusion

To sum up, the educational thought and teaching method of “Internet +” is the development trend of today’s times. The Internet is not only the crystallization of today’s science and technology, but also the foundation of the Party school to establish a good education platform in the future. Therefore, the Party school should timely discover and reflect on the education problems, and carry out targeted solutions for various problems, so as to do a good job in Internet education, improve the teaching level of the Party school teachers, help Party members and cadres to improve the learning effect, and give play to the value of Internet education.
