Abstract: In the new era of anti-corruption background, "higher medical college students, culture and education" the practice of the present situation and its existing problems, "higher medical college students, culture and education" present situation and cause analysis, and crack "higher medical college students honest culture and education" practical problems, is an important content of our college students, culture and education, this paper will be summarized and conclusion.

Keywords: New era; Clean culture; Educational innovation

Fund Project:

Path innovation of clean culture in medical colleges and universities

1. Introduction

The construction of clean culture in higher medical colleges is an important part of the fundamental task of higher medical colleges and universities, an important content for colleges and universities to realize the goal of "double first-class" construction, and an important way for colleges and universities to guarantee the construction of a clean and upright political ecology. Therefore, this paper studies and analyzes the work of integrity education in higher medical colleges and universities.

2. The innovation status of clean culture path in higher medical colleges and universities

2.1 Organizational system guarantee is not in place

At present, the construction of clean culture in higher medical colleges and universities is mainly led by administrative departments. In the process of implementation and promotion, due to the lack of systematic organizational leadership and institutional guarantee, the promotion effect of clean culture has been affected^[1]. First, the construction of clean culture in higher medical colleges lacks systematic and standardized institutional support, and lacks effective organization and coordination when carrying out the work. The construction of clean culture involves many departments and fields, and the communication and coordination among relevant personnel are not close enough. For example, in carrying out clean cultural education activities, people in different departments have different understandings of clean culture, resulting in the phenomenon of "you push me, I push you" in the activities. In the process of promoting the construction of clean culture, because there is no systematic and standardized system to support it, there is no linkage mechanism among various departments, and the work efficiency is low.

2.2 The carrier construction is not rich

Higher medical colleges honest culture carrier construction is not rich, one is the lack of theoretical carrier, 2 it is the lack of practice carrier, three is the lack of network carrier, for example: zhongnan hospital of Wuhan university in "honest culture into campus" did a lot of work, opened a "honest culture lecture", "honest culture publicity column" and a series of activities of the carrier, the "clean culture into campus" throughout the daily work, students have identity and enthusiasm, but from the perspective of the survey results, only 10% of the students think college honest culture course is very important.

2.3 Position construction is not standard

The construction of clean culture positions in colleges and universities includes the construction of organizational positions

and activity positions. The organization positions mainly includes: Party leaders and teachers take the lead in establishing clean education base; establish clean culture research institutions; play the role of trade union, youth League committee, student union and other student associations, organize various forms of clean culture activities; rely on new media platforms such as school website, microblog, WeChat, open columns of "clean speaking", "clean listening", "clean class" to guide teachers and students to participate in the construction of clean culture. At present, the construction of clean culture positions in colleges and universities is relatively rich, but in the selection of positions, some are "uniform", some are "uniform"; in form, some are "single boring", some are "lack of novelty"; in the subject, some are "passive acceptance" and some are "self-constructed".

2.4 Incomprehensive publicity and education

The construction of clean culture in colleges and universities is closely linked with the reform of education and teaching. Clean culture is taken as an important part of ideological and political affairs in the course, so that students can receive subtle education in the learning process. Part of higher medical colleges in the process of honest culture construction, attaches great importance to the education teaching reform, but in honest cultural education, only a few teachers will clean cultural education into the daily teaching activities, most of the teachers just in the teaching process of students clean cultural education, not into the daily teaching activities. For example, a medical university included "clean culture into the classroom" into the scope of ideological and political education, but only a small number of teachers gave relevant teaching, and the teaching content is relatively limited, and the lack of communication and interaction between teachers and students, it is difficult to achieve the expected results.

2.5 Unscientific assessment and evaluation

At present, the evaluation system of clean culture construction in medical colleges and universities is mostly internal evaluation. The internal evaluation indicators mainly include the theoretical level of clean government, clean consciousness, clean behavior, clean value concept and clean culture construction, etc. The specific evaluation content is mainly ideological and moral, organizational discipline, style construction and other aspects. However, the current evaluation system of higher medical colleges and universities is too simple, which only pays attention to the external form, lacks the internal connection and connotation understanding, and fails to effectively reflect the essence and effect of education.

In the study, we found that some medical colleges do not carry out special assessment and evaluation on the construction of clean culture construction, and students are not highly motivated and do not realize its importance; some medical colleges only pay attention to the professional ability and scientific research achievements, and pay not enough attention to the assessment of clean culture construction.

3. Innovation strategy of clean culture path in higher medical colleges and universities

3.1 Attach importance to the construction of clean culture on campus

In the process of the construction of campus clean culture, medical colleges and universities should incorporate the construction of campus clean culture into the overall campus construction plan, and ensure that the construction of campus clean culture is closely combined with the daily work of medical colleges and universities. When carrying out the construction of clean culture on campus, higher medical colleges and universities should make specific plans according to the actual situation of the university and pay attention to strengthening the ideological education of students^[2].

Medical colleges and universities should pay full attention to the construction of clean campus culture, and actively guide students to carry out self-learning and self-education, so as to cultivate students' correct values and outlook on life. In addition, when carrying out the construction of campus clean culture, higher medical colleges should also pay attention to the innovation of publicity methods to ensure that students can accept the latest concept of clean culture.

3.2 Build a clean culture with students as the center

To carry out the construction of clean culture in higher medical colleges and universities, we should take students as the center and start from the thoughts of students, so as to spread the clean culture to the hearts of every student. From the actual situation of medical school, this can be realized in the following ways: first, in the medical school education, combine medical knowledge and clean culture education to establish the concept of honesty; second, combine the medical knowledge with our traditional culture and socialist core values, so that the students can understand the traditional culture while learning knowledge.

3.3 Build a clean campus culture system with the curriculum as the starting point

In the course teaching, according to the characteristics and requirements of the construction of clean culture in higher medical colleges, strengthen the organic combination of ideological and political courses and courses, give full play to the role of the first

classroom as the main channel of education, actively integrate the elements of clean culture, and bring clean education into the talent training program and teaching plan of medical colleges. In addition, medical colleges and schools should make full use of clinical teaching bases and practice bases, give full play to the role of TCM education resources in hospitals through classroom teaching, special lectures, social practice and other forms, infiltrate honesty education into medical ethics education, and strengthen students' medical ethics education.

3.4 Carry out various forms of clean cultural activities

(1) The essay competition of "I and Clean Culture" was held. The students took clean culture as the theme and expressed their understanding of clean culture and their responsibility to the society through the form of writing.

(2) Carry out the activity of "honesty keynote speech" in the entrance education of freshmen, and invite famous scholars and professors from inside and outside the university as speakers to bring a knowledge feast about "honesty" to the freshmen.

(3) Hold the "honesty Stories" activity to guide students to establish a correct outlook on life, values and world outlook by telling the "honesty story" between teachers and students of the school.

(4) Hold a speech contest with the theme of "clean culture into the campus", to show the understanding and perception of the teachers and students on the "clean culture" from various angles, and to push the activity of "clean culture into the campus" to a climax.

3.5 Strengthen the construction of new network media

For higher medical colleges, campus network is an important channel for students to publicize clean culture, and also an important way for students to obtain all kinds of information. Under the current background of social informatization, by strengthening the construction of the network new media, it can effectively expand the propaganda scope of the campus clean culture and realize the popularization of the campus clean culture.

Specifically, medical colleges can strengthen the construction of new network media through the following ways: first, the campus network to report the disciplinary violations on the campus; second, the campus clean culture network exchange platform to actively communicate with students' parents; third, the use of WeChat public account, microblog and other platforms to release all kinds of clean culture information on the Internet.

Epilogue

Article from the importance of higher medical colleges and the clean culture construction, the problems existing in the clean culture construction and higher medical colleges clean culture construction path innovation three aspects, discusses the higher medical colleges clean culture construction path innovation, and puts forward to strengthen ethics strengthen construction, optimize the course system, rich theme activities, strengthen students' ideological and political education and deepen the school collaborative innovation path, in order to higher medical colleges for clean culture construction to provide beneficial reference.
