Abstract: College student party members are disseminators of the concept of ecological civilization, and are also the vanguard and main force in promoting the construction of ecological civilization. In the critical period of China's successful transition to ecological civilization, this article will explore the integration of ecological civilization construction and party building work in universities. Analyzing the necessity of strengthening sustainable development education in universities, grasping the current teaching situation, and proposing to focus on ecological civilization construction, we can innovate party building work models, enrich publicity and education forms, cultivate party members' ability to serve ecological civilization construction, carry out practical activities of ecological civilization construction, and innovate the path of party building work in universities.

Keywords: Sustainable development; Ecological civilization construction; Integration of Party building

1. Introduction

Since the launch of the 18th National Congress of the Communist Party of China, the vigorous promotion of ecological civilization construction has been put forward, which means that China has officially entered the period of ecological civilization transformation. Sustainable development and ecological civilization are essentially identical, and cultivating talents that meet the requirements of ecological civilization society in universities has become an effective means and urgent task to strengthen sustainable development education^[1]. Ecological civilization is a brand new social civilization concept that abandons completely human centered values and advocates a development perspective that constrains and controls human behavior. This approach takes a longer-term perspective on the relationship between humans and nature, integrating humans and their living environment, as well as the development of humans and society. As an important battlefield for the construction of ecological civilization in universities, college students are the objects of higher education, and college student party members, as advanced members of college students, bear important social responsibilities under the assumption of efficient ecological civilization. So, based on the perspective of sustainable development, we will explore the integration of ecological civilization construction and party building work in universities.

2. The necessity of ecological civilization construction in universities from the perspective of sustainable development

College students, as reserve talents for national construction, are the backbone of future national construction and undertake specific tasks for the construction of various industries in society. At present, various universities in China have preliminarily formed a sustainable development education system. Incorporating the content of sustainable development into moral education is beneficial for college students to form a comprehensive value system of sustainable development during their time in school, ultimately transforming it into conscious ecological moral behavior^[2]. However, from the current situation of sustainable development education in universities across the country, there is a widespread disconnect between theory and practice, resulting in some students' insufficient understanding of sustainable development knowledge, weak practical operability, and weak ecological and moral awareness. Therefore, it is necessary to strengthen the reform of sustainable development education in universities in the context of the comprehensive construction of "ecological civilization" in China today, so as to integrate it with the current education system in

universities and cultivate the awareness of sustainable development among college students.

3. The Path of Integrating Ecological Civilization Construction with Party Building in Universities

3.1 Innovative Party Building Work Model

In the construction of ecological civilization, it is necessary to fully leverage the fortress role of college student party branches. We should advocate ecological party building, innovate the way party branches are set up, extend the responsibility area of party members to dormitories, canteens, and classrooms, establish an ecological chain of party organizations, build a new platform for party members to participate in ecological civilization construction, broaden the channels for college student party members to participate, and provide broad space for college students to participate in various activities. The establishment of student party branches should be innovated in a timely manner, and “ecological civilization learning type party branches” and “ecological civilization practice type party branches” can be classified and established in grassroots student party branches, specifically responsible for planning, promoting, implementing, and promoting ecological themed activities^[3]. One is to establish the ecological civilization awareness of party members and have a behavioral demonstration effect; Secondly, guiding party members to effectively play a pioneering role and have a positive impact; The third is to supervise and correct some students’ uncivilized behaviors that violate ecological protection, such as environmental destruction and extravagance.

3.2 Enriching publicity and education forms

We need to incorporate ecological civilization professional education into the party building work of grassroots party organizations among college students, enrich and improve educational content, and innovate educational forms. Firstly, we need to add special topics on ecological civilization construction in party member education and training, and effectively improve the ecological civilization level of college student party members; Secondly, various forms of publicity and education should be carried out to create a good humanistic and ecological environment. For example, party branches can conduct more themed activities on ecological civilization construction through forms such as essay solicitation, knowledge competitions, debate competitions, party member forums, and grassroots social practices. Conduct various forms of publicity and education to form a virtuous cycle system and improve students’ ecological civilization literacy^[4]. The third is to strengthen the construction of campus ecological culture. Schools should establish the concept of “green universities”, with teachers setting an example, students actively practicing, and using the external environment to infect students. The construction of ecological campuses should drive the construction of ecological civilization and society.

3.3 Cultivating Party Members’ Ability to Build Ecological Civilization Services

We should actively promote the organic integration of the carrier of party building activities and ecological civilization construction, such as forming a volunteer team for ecological civilization construction with party members as the main body, and organizing multiple ecological and environmental protection volunteer activities. Under the guidance of the school party committee, student party organizations participate in organizing volunteer activities at all levels, providing various social services, promoting the construction of campus ecological civilization, improving the ecological civilization quality of volunteers, and making contributions to the coordinated and sustainable development of society. At the same time, expand the influence of volunteer teams among students, making them a locomotive for promoting the construction of campus ecological civilization. Through volunteer activities, more college students are encouraged to participate, and their ecological awareness and knowledge are enhanced, thereby improving the ecological environment of the campus. Establish a radiation effect of ecological civilization construction led by the Party and the Communist Party of China, and improve the interest oriented mechanism for ecological civilization construction.

3.4 Carry out practical activities for ecological civilization construction

We should fully tap into the potential of the second classroom and strive to guide party members to respect nature, cherish ecology, protect the environment, and save resources in an ecological and civilized campus. Guide college student party members to develop a habit of “green” behavior, starting from small things and around them, actively participating in environmental protection and public welfare activities, and improving the quality of ecological civilization through practical activities to protect the environment and save resources. At the same time, it is necessary to influence and radiate social culture through the campus culture of universities, gradually making the concept of building a resource-saving and environmentally friendly society a consensus of the whole society. We should consciously carry out green actions for ecological and environmental protection, influence and drive more people to join green actions, and make a series of concepts such as “environmental protection”, “resource conservation”, and “ecological civilization” deeply rooted in people’s hearts, enhancing the ecological civilization awareness of the entire society.

3.5 Building an Ecological Civilization Construction Party Member Evaluation System

Strengthen the guarantee mechanism for ecological construction, make ecological civilization construction a mandatory content for the education and training of student party members and cadres, and include the participation of ecological civilization activities in the assessment standards for party members. By regularly organizing Party members to study intensively, holding Democratic life meeting, carrying out theme activities on the anniversary of the founding of the Party and other forms, the construction of ecological civilization is regarded as an important learning and exchange content, improving the theoretical level, enhancing civilization awareness, improving ecological literacy, and building and strengthening the guarantee mechanism for Party members' ecological construction. Regularly organize ecological civilization themed activities, and regard participation frequency and performance as important criteria for active members joining the Party, probationary party members becoming regular members, and party member evaluation.

4. Conclusion

In short, from the perspective of sustainable development, achieving the integration of ecological civilization construction and party building education in universities. By innovating party building work models, enriching publicity and education forms, cultivating party members' ability to serve ecological civilization construction, and carrying out practical activities for ecological civilization construction, cultivating the awareness of sustainable development among college students can not only clarify their responsibilities in social development, It is even more important to equip college students with the skills to identify and solve problems in the process of ecological civilization construction, that is, to gradually develop the ability to cope with important crises faced by sustainable development such as climate change, biodiversity reduction, energy shortage, and population expansion. This sustainable development skill is the most important historical mission entrusted to contemporary college education by the construction of "ecological civilization".
