Abstract: To jointly create a collaborative education system and a collaborative funding education exchange platform for sharing. During the actual implementation, it is necessary to hold the advanced concept of collaborative funding and education, with the main idea of collaboration as the focus; Expand the mode of collaborative funding and education, and give full play to the carrier synergy; To provide a good environment for co financing education and continuously strengthen the environment.

Keywords: Universities; Students Subsidize Education; Synergetic Thinking

Introduction

Collaborative thinking is a kind of self-organized cognitive way, which is a way to find the similarities between things. The dialectical way of collaborative thinking makes an overall analysis of the relationship between structure, function, system and environment, and maximizes the overall function of the system. The efficient task is mainly to implement the idea of establishing morality and cultivating people, integrate the work content into teaching and education, and reasonably use collaborative thinking to improve the quality of funding and education.

1. The requirements of college students' funding education based on collaborative thinking in practical work

1.1 Diversified concept of collaborative funding and education

The college student funded education based on collaborative thinking requires the formulation of systematic work implementation content, and takes the education concept of full staff, whole process and systematization as the education concept. All staff requires that the relevant personnel of domestic funded education in colleges and universities should have a positive working attitude and a high sense of responsibility; At present, the participants in the funding education work are mainly composed of the student funding management center and the school funding professionals. The composition of the personnel is usually unable to meet the needs of the actual funding education work, resulting in certain difficulties in the actual work. The whole process is based on the nature of the funded education work. The funded education work has a systematic feature. The funding for students needs to be tracked from the beginning to the end. In this process, it is not only necessary to implement the ideological and political quality education for the funded students, but also to maintain the openness and transparency of the work content, and take the funding for students as an educational work throughout^[1]. In addition, the use of the funds obtained by the subsidized students should be tracked and understood until the end of student loan repayment in the later period. The whole process needs to strengthen the education and guidance of students' integrity ideas, so as to become modern, healthy and new youth. Systematization mainly refers to the space requirements for colleges and universities to subsidize and educate people, including different dimensions in and out of school, virtual and real, etc. Using campus, family, society, network, etc. as the carrier, it is really realizing the all-round and systematic ideological guidance and help for students, and ensuring that students can grow up healthily^[2].

1.2 Perfect collaborative funding education platform

According to the previous experience in supporting education in colleges and universities, it is an important guarantee to ensure the effective development of the work to have a good platform for supporting education in collaboration. At present, the implementation of collaborative funding education in colleges and universities mainly relies on the Internet and other information technologies. By building a network platform for student funding, it is more convenient and quick to learn about the poor students' personal, family, funding and other information, which can better promote the development of funding education, ensure that funding education is more targeted, targeted and increase the efficiency of fund use. Secondly, the establishment of the social participation platform is also an important

implementation way of funding education. For the funding education work, it is not only limited to colleges and universities. Through cooperation with relevant public welfare organizations in the society, social activities other than funding can be provided for students. At present, most of the applications are career planning training, skills training, etc., which can not only solve the economic situation of difficult students, It can also improve the comprehensive quality of students with difficulties and lay a solid foundation for their future development. Students will also enhance their ideological awareness in the process of participating in activities, promote the progress of gratitude education in schools and society, and enable students to obtain more comprehensive gains [3].

2. Innovative funding and new ways of educating people

Based on the above analysis, we should pay attention to the top-level design and overall planning of the scheme in carrying out the college student funded education activities led by collaborative thinking, reasonably divide the functions of relevant personnel in the specific implementation of the scheme, actively integrate the educational resources in the school, take educating people as the main goal, implement the scheme to achieve the effective implementation of the funded education.

2.1 Focusing on funding and educating people to achieve coordinated development

In the process of supporting education, we should pay attention to the positive effect of coordinated development. In the whole work process, we need to let the main body of the work - the assisted students have a sense of identity and gain, and can really feel the care and warmth of colleges and universities in the process of activities. In the specific implementation, we should first strengthen the connection between the government, universities and students, create a practical funding system, and lay a solid foundation for our work. As the leading party of the work, colleges and universities should combine the existing national funding system, cooperate with people, groups and units from all walks of life in the society, create social welfare funds or provide internships for college students, lay a solid foundation for funding and educating people, so as to provide poor students with good education and employment opportunities [4]. Secondly, through the establishment of the linkage funding education system by colleges and universities, relevant departments and colleges and departments, the scale of the funding education team will be improved. In addition, colleges and universities should also actively establish working groups to ensure that the implementation plan of funding education can be truly implemented and coordinated, and send professionals to implement one-to-one support for poor students, so as to improve the comprehensive effect of funding education.

2.2 Optimize the carrier of financial aid and education and improve the implementation effect

The essence of subsidizing education is to realize the ideological education of the students to be helped in the form of material assistance. This process needs to take different forms as the carrier to achieve the intended goal. There are many kinds of main carriers supporting education, mainly in the form of curriculum, culture, network, etc. Faced with such a variety of funding education carriers, colleges and universities need to actively integrate the existing resources of colleges and universities in their work, effectively play the advantages of different carriers in funding education, and thus increase the applicability and effectiveness of funding education.

2.3 Improve the collaborative way of funding education and create a healthy environment

As far as the university funded education is concerned, the state of the campus environment is the main factor that affects the development of the collaborative work of the university funded education. As the collaborative work of the university funded education is diversified and extensive, it will have a two-way impact on the implementation effect of the university funded education. When the university participates in the exchange of the external environment as a way, it will help the development of the funded education work, However, due to the influence of the current social atmosphere, for example, there are doubts about the ideological and moral character of the assisted college students in the society, and college students purchase luxury goods through bad online loans, which also have a relatively serious negative impact on college students' funding work [5]. In this regard, to ensure the effective implementation of the collaborative work of supporting education, it is necessary to have a healthy environment. Only by optimizing the collaborative work of supporting education can the environment be improved, can the role of financing education be truly played.

3. Conclusion

At present, the development of university funding education needs to adhere to collaborative thinking as the guiding principle, and through innovation and various effective collaborative ways as a blessing, to better help college students enjoy the help of policies, and improve the effectiveness of funding education under the role of funding education.
